

HDR-HC9
HDV Camcorder

While the AVCHD format continues to make great strides in image quality, HDV still holds the edge for serious HD shooters on a budget. Its ease of editing, plus the archival stability of tape over flash or HDD memory, can make up for the lack of random scene access and the slower capture times.

Accordingly, Sony's current entry in consumer HDV goes out of its way to make your shooting experience a memorable one—whether you're a proud parent chronicling Baby's first steps or an aspiring Coppola eager to stage your own backyard apocalypse.

Of course, image quality is key—something Sony has always delivered on. And the HDR-HC9 is no exception. Its large CMOS image sensor and professional-quality 10x zoom offer remarkable high-definition imagery with rich, natural color saturation and detail. The Carl Zeiss lens reduces unwanted glare—for increased contrast and color—and combines with the innovative x.v.Color technology to bring nearly twice as many viewable colors into your recording. Sony's 24-frame Cinematic mode and Super SteadyShot optical image stabilizer lend an added level of movie-like smoothness and gloss.

Equally important is control. And while the HDR-HC9 offers excellent auto modes for those who don't know an f-stop from a door stop, the camera's generous set of manual controls are the difference-maker when it comes to creating polished, professional-level video. Controls like manual focus; shutter; exposure; sharpening. External microphone input and headphone jack. User-assignable buttons. Focus peaking and center marker. It's like film school in a box. Or the world's most versatile home-movie machine. And once every carefully crafted image is safely on tape, you know it will last.

- 1/2.9" ClearVid CMOS sensor (3.2MP)
- Carl Zeiss Vario-Sonnar 10x optical zoom (37mm filter)
- 2.7" 16:9 touch panel LCD screen • HDV/DV format recording • 24-frame Cinematic mode
- 6.1 megapixel still image capture
- Smooth slow record (up to 12 seconds of slow-motion video)
- Microphone input, headphone jack • White balance/exposure shift • Memory Stick media slot
- S-Video, Component, i.LINK, USB ports • HDMI output to your HDTV

PV-GS90
MiniDV Camcorder

Get close to the action with the PV-GS90's 42x optical zoom. Panasonic's Advanced Optical Image Stabilization keeps your image steady no matter how close you get, while MagicPix function and a built-in LED light make sure you capture great images even in dim light.

- 1/6" image sensor with 680k pixels
- 42x optical/2000x digital zoom
- 2.7" wide LCD screen • One-Touch menu navigation
- Pure Color Engine image processor achieves superb color reproduction
- Soft Skin function beautifies skin tones
- Built-in zoom microphone

#PAPVGS90 \$249.95

VIXIA HV30
HDV Camcorder

Known for its superior image quality of its professional photo and video products, Canon has also consistently provided a wealth of manual control to its consumer-end cameras.

The HV30, like the award-winning HV20 before it, continues that tradition.

The quality of its HDV images remains among the best consumer-level high-definition in the business. That's not only a result of the genuine Canon optics in the camera's 10x HD lens, but of the combination of Canon's 1920 x 1080 CMOS sensor and its DIGIC DV II image processing. What that means, simply, is crystal clear images with exceptional color reproduction and reduced noise.

But the HV30 doesn't stop with image quality. It also allows you to use that quality *creatively*. That's where the advanced features come in—the customized image settings (color depth, brightness, contrast, sharpness), manual shooting modes (Aperture Priority, Shutter Priority, Exposure, Focus, and White Balance), mic and headphone jacks, and manual audio. Added to this is Canon's famed 24p progressive mode, which, combined with the Cine setting, makes for a more film-like look than standard 60i. A new 30p mode—exclusive among consumer camcorders—retains the film-like quality and low-light sensitivity of 24p while reducing motion blur and converting more easily to the Web. All of these features are accessed by a convenient joystick located just under your thumb.

Helping you make more informed decisions is a non-solarizing LCD screen—with its enhanced color reproduction and wide viewing angle—along with level and grid markers, Focus Assist with peaking, and 70/100 IRE zebra patterns to measure overexposure. In the world of HDV video, you won't find a more professional camera at a more amateur price.

- 1/2.7" CMOS sensor (2.96 MP) • Canon HD 10x optical zoom (43mm filter)
- 2.7" multi-angle LCD screen • HDV/DV recording • 3-speed zoom
- 60i, 24p, 30p frame rates + Cine mode • Instant AF • 2.76 MP still images
- Analog/digital converter • Mic and headphone jacks • MiniSD slot for digital photos
- Component, IEEE-1394, USB 2.0, AV input, HDMI • Hot accessory shoe

PV-GS320
3-CCD MiniDV Camcorder

Enjoy the vivid colors and crisp detail of 3-CCD imagery. Unlike camcorders with only one imaging sensor—which processes all colors together—3-CCD cameras separate light into red, green and blue channels, providing sharper and more accurate reproduction.

- 3 1/6" CCDs (800K pixels each)
- Leica Dicomar 10x optical/700x digital zoom • 4:3 or 16:9 shooting
- Manual aperture/shutter/focus/gain • Advanced Pure Color image processor
- 1 lux min. illumination (via MagicPix) • 2.7" wide LCD display • Optical image stabilization
- SD memory card slot • 37mm filter size
